Experience

- **Techvista (Systems Limited)** — Dubai, United Arab Emirates
  Associate Consultant — *June 2026 – Present*
  - **Backend Development**: Develop and customize backend modules for client e-commerce platforms on `Magento`.
  - **Project Scoping**: Draft Work Breakdown Structure (WBS) documents to scope deliverables and estimate effort for client projects.
- **e& (Etisalat and Group)** — Dubai, United Arab Emirates
  Software Engineer Intern — *August 2024 – March 2025*
  - **Backend Development**: Implemented REST controllers and request validation using `Spring Boot`, improving API reliability and reducing service errors for internal microservices.
  - **Issue Debugging**: Analyzed service logs and stack traces to diagnose backend issues, assisting in development with faster bug resolution.
  - **Ticket Resolution**: Investigated and closed assigned Jira tickets involving API behavior, configuration, and service-level bugs.
- **Rochester Institute of Technology** — Dubai, United Arab Emirates
  Student Researcher — *June 2023 – November 2023*
  - **Security Research**: Built Android remote-access tooling to simulate spyware behavior and collect system call data.
  - **ML-Based Detection**: Wrote Python script to train ML models to detect anomalous microphone and camera usage patterns from system call data.
- **Malcrove** — Remote
  Cybersecurity Intern — *March 2022 – September 2022*
  - **Security Assessment Assistance**: Accompanied on-site penetration tests, studied firewall setup and Suricata rule configuration, and assisted in report writing and formatting.

Skills

- **Languages:** Java, PHP, Python, TypeScript, Rust, C#, SQL, Bash
- **Frameworks / Backend:** Spring Boot, Magento, React, Next.js, REST APIs, Microservices
- **Data / DevOps:** PostgreSQL, MySQL, Docker
- **Security:** Burp Suite, Metasploit, Nmap, Wireshark, Nessus, Ghidra, Suricata, Wazuh, Active Directory

Projects

- **MediTracker (Personal Project)**: Designed and implemented RESTful APIs using `Spring Boot`, enabling secure user-specific data access. Integrated `PostgreSQL` with `Docker` and a `React` front-end layer, simplifying local development and deployment. Containerized each component independently, reducing setup time and improving maintainability.
- **Secure Company Environment (Active Directory + Wazuh IDS)**: Built a secure Windows domain environment using Active Directory and Group Policy. Integrated Wazuh IDS for real-time monitoring, log collection, and security alerting.
- **Rust Command and Control Framework (Cybersecurity Tool)**: Designed an asynchronous TCP-based multi-client C2 system using `Tokio` and `rustls`. Implemented runtime certificate management and modular command handling.

Education

- **Rochester Institute of Technology (RIT)** — Dubai, United Arab Emirates
  B.S. Cybersecurity — *2020 – 2024*
